HEAD OF TECHNOLOGY · FULL-STACK ENGINEER

T +966 53 613 9108 · +966 56 426 9056 E bej.abdelhak@gmail.com L Riyadh, Saudi Arabia

PROFILE

Technology leader and hands-on full-stack engineer with **16+ years** delivering production software end to end — database schema, API, web, mobile and the interface itself. I lead the technology department at **Maham Group**, where I own the architecture and delivery of MAHAM EXPO: a seven-portal exhibition and event-management platform on a Laravel API, React portals and an Expo/React Native app, live for merchants, investors and sponsors across Saudi Arabia. My route into engineering ran through **art direction and UX/UI design**, and it still shapes everything I ship. I build with **AI as part of the toolchain, not as an experiment** — Claude Code, Cursor and GitHub Copilot are in my daily loop, and I design the agent workflows and review gates that keep their output production-grade.

EXPERIENCE

Head of Technology (CTO)

2024 — PRESENT

Maham Group — Riyadh, Saudi Arabia

- Own the full architecture and delivery of **MAHAM EXPO** — a production platform of seven portals (admin, investor, merchant, sponsor, public, mobile, landing) on a single pnpm monorepo, backed by a Laravel 12 API and a MySQL/Redis core.
- Designed and built the **core business cycle** end to end: space booking → approval → contract generation → dual-signature → invoicing with VAT → payment → settlement, plus a tripartite brokerage flow for investor-owned events.
- Built a bespoke **permission-based RBAC** layer with a dedicated permissions service, sovereign finance paths and a CEO approval gate, and integrated **payments and compliance** — EDFA hosted checkout with idempotent webhooks, ZATCA e-invoicing with QR, and Odoo ERP synchronisation across accounts, journal entries and invoices.
- Shipped **AI-native features** into the product — OCR-based KYC, Whisper voice commands for executives, AI lead scoring and 12-language auto-translation via a Claude → Gemini fallback chain.
- Established the engineering practice from zero — **monorepo consolidation**, 20 GitHub Actions workflows for path-triggered CI/CD, scope guards, CODEOWNERS and pre-commit secret scanning, replacing manual server deploys entirely — and lead the team, standards and architecture decisions the department runs on.

Director of Media Department

2012 — 2020

Preservation Center for Educational & Pedagogical Consultations — Saudi Arabia

- Led the media department for **eight years**, owning creative direction, digital production and the department's technical output.
- Directed brand, print and motion work end to end while building and maintaining the web presence in-house — managing the team, the pipeline and delivery against fixed institutional deadlines.

Full-Stack Developer & UX/UI Designer

2008 — 2012

Codec — Tunisia

- Four years building client web applications front to back, from interface design and prototyping through to server-side delivery.
- Owned the **UX/UI** for delivered projects — research, wireframes, visual design and the front-end implementation.

SELECTED WORK

MAHAM EXPO — Exhibition & Event Management Platform

Architect and lead engineer · Laravel 12 · React 19 · Expo · Docker · mahamexpo.sa

An operator-model platform running live in Saudi Arabia. Investors build and own venues, merchants book and contract for spaces, sponsors buy packages — and Maham operates, approves and settles every relationship in between. One monorepo, seven front-ends, two Laravel services, containerised behind Nginx and deployed entirely through CI.
